ESD actuators in Italy

[Ascendant Technologies](#) has recently delivered automation packages to the facility of a major Italian Ball Valve manufacturer, destined for a project in the UK North Sea.

The [Flowbus](#) actuators were complete with stainless steel control panels and stainless steel accessory packs, including rebreather systems to prevent ingress of corrosive air during operation.

The largest actuator, with a swept volume of over 200 litres, was configured to close in less than 5 seconds.

For more information on [Flowbus](#) or a copy of the latest approval and reference lists, contact Ascendant Technologies on +44 1495 767210 or info@ascendant-technologies.com

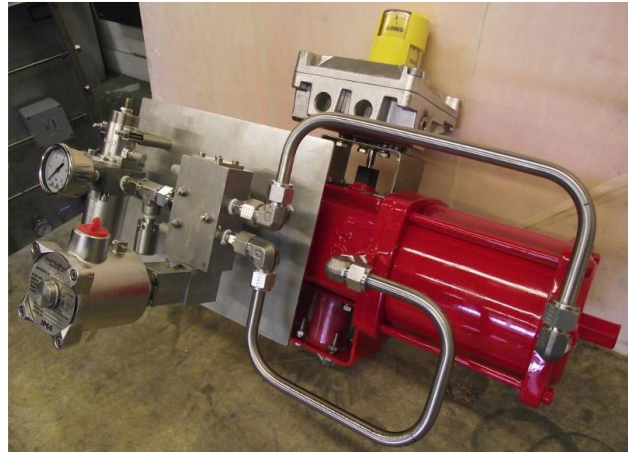

Compact DA unit

Although the vast majority of actuators in the Oil & Gas sector are fail safe, [Flowbus](#) also manufactures a competitive range of double acting scotch yoke actuators which conform to the same international standards.

They are CE marked and ATEX approved (the SIL certification is only applied to the spring return models which are used for ESD and HIPPS applications).

The picture shows an EPA series double acting actuator, fitted with a complete stainless steel instrument pack, which was recently supplied into the UK North Sea via a major Valve package vendor.

For more information on Flowbus double acting actuators, contact Ascendant Technologies on +44 1495 767210 or info@ascendant-technologies.com

Accessory mounting pad

[Ascendant Technologies](#) stocks actuators which have a Namur pad for mounting a switchbox or positioner using a standard 80x30x20mm mounting kit.

The pad is epoxy painted to a thickness and colour to match the actuator.

For more information on stock actuators with namur pads, contact Ascendant Technologies on +44 1495 767210 or info@ascendant-technologies.com
